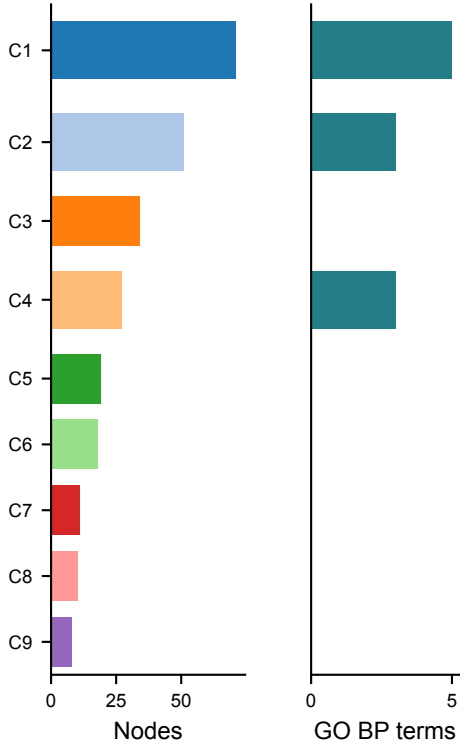
B Community size and functional context



Top three BP terms (FDR, p, GO ID order)

C1
mitochondrial electron transport, NADH to ubiquinone
proton transmembrane transport
proton motive force-driven ATP synthesis

C2
regulation of transcription by RNA polymerase II
regulation of gene expression
regulation of DNA-templated transcription

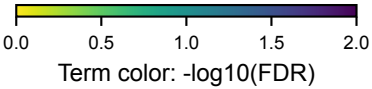
C3
No significant BP term

C4
regulation of DNA-templated transcription
positive regulation of transcription by RNA polymerase II
cell differentiation

C5
No significant BP term

C6
No significant BP term

C7
No significant BP term

C8
No significant BP term


C9
No significant BP term
